PROFESSIONAL SUMMARY

Developer developing my skills in web application development using Java, Spring Boot, Angular, TypeScript and PostgreSQL. I independently designed and deployed the full-stack YourWatchRental project, including a REST API, JWT authentication, role-based access control, unit testing and deployment on a VPS. I can effectively use AI tools for debugging and improving development efficiency. I also have professional experience providing user support, troubleshooting basic hardware and software issues, and hold professional qualifications INF.03 and INF.04.

SKILLS & TECHNOLOGIES

- **Backend:** Java, Spring Boot, Spring Data JPA, REST API, Spring Security, JWT, PHP (podstawy)
- **Frontend:** Angular, TypeScript, JavaScript, HTML, CSS
- **Databases:** PostgreSQL, SQL, MySQL
- **Testing & Tools:** Git, GitHub, Maven, JUnit, Mockito, Postman
- **Deployment & Server:** Ubuntu, Nginx, VPS

PROJECT / PORTFOLIO

yourwatchrental.pl – web application for watch rental.

Tech stack: Java, Spring Boot, Angular, TypeScript, PostgreSQL, Spring Security, JWT, JUnit, Mockito, VPS

- Independently designed and developed a full-stack web application covering the frontend, backend, and relational database.
- Implemented a rental management system, user authentication, and role-based authorization with ADMIN and USER roles.
- Designed and implemented a REST API and frontend application using Angular.
- Implemented image handling and email communication.
- Developed approximately 100 backend unit and integration tests using JUnit and Mockito.

Deployed the application to a VPS using Ubuntu and Nginx.
